THE IVERMECTIN DOUBLE-CROSS SCAM

● ● ●

+

Once upon a time in Greece

IN 1821, THE PEOPLE OF GREECE ROSE UP AGAINST THE OTTOMAN EMPIRE THAT HAD CONQUERED THE AILING ROMAN EMPIRE AND ITS DEPENDENT TERRITORIES IN 1453. LIFE UNDER THE TURKISH YOKE HAD BEEN HARD, AND JOHN KAPODISTRIAS, THE MAN CHOSEN BY THE GREEKS IN 1827 TO LEAD THEIR NEWLY LIBERATED NATION, FACED DAUNTING PROBLEMS OF INDUSTRY AND EDUCATION, BUT ON HIS FIRST ARRIVAL HE HAD A MORE PRESSING ISSUE: FOOD.

THE NEW GOVERNOR SAW POTATOES AS THE ANSWER, AND LEFT PILES OF THEM FOR GREEK FARMERS TO TAKE AWAY AND PLANT IN THEIR EMPTY FIELDS. THE FARMERS, HOWEVER, SUSPECTING SOME TRICK, WOULD NOT TOUCH THEM.

SO KAPODISTRIAS PLACED THE PILES OF UNWANTED POTATOES UNDER ARMED GUARD.

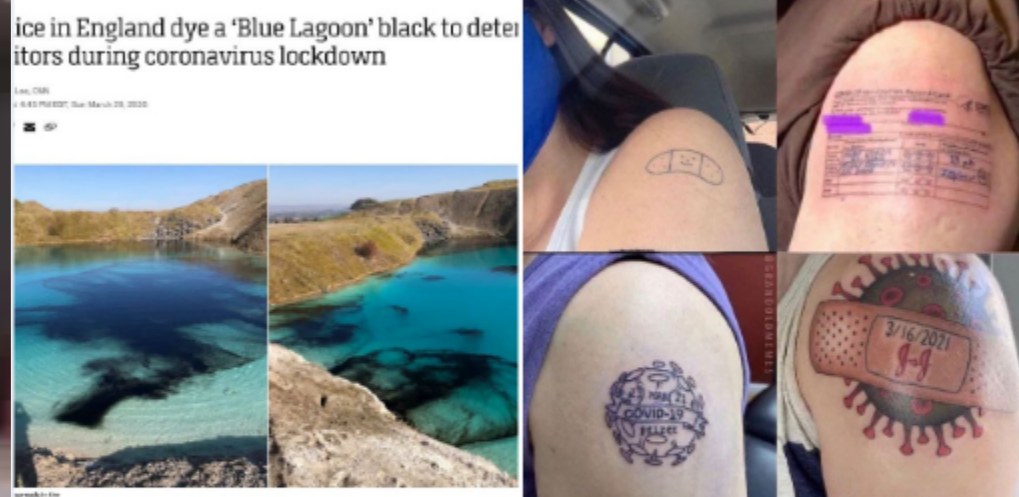

THE FARMERS NOW SUSPECTED THE POTATOES WERE A DELICACY RESERVED FOR THE RICH, AND BEGAN TO STEAL THEM WHILE THE GUARDS PRETENDED NOT TO NOTICE. SOON, NOT A SINGLE ONE WAS LEFT.

Covid Nonsense and “Inoculation”

IVERMECTIN KILLZ

HANDWIKI

Inoculation theory

Inoculation theory is a social psychological/communication theory that explains how **an attitude or belief can be protected against persuasion or influence in much the same way a body can be protected against disease—for example, through pre-exposure to weakened versions of a stronger, future threat.**^{[1][2]} The theory uses medical inoculation as its explanatory analogy—applied to attitudes (or beliefs) rather than to a disease. It has great potential for building public resilience ('immunity') against misinformation and fake news, for example, in tackling science denialism, risky health behaviours, and emotionally manipulative marketing and political messaging.

Short description: How people's attitudes can resist change through weak counterargument exposures

The theory was developed by social psychologist William J. McGuire in 1961 to explain how attitudes and beliefs change, and more specifically, how to keep existing attitudes and beliefs consistent in the face of attempts to change them.^[3] Inoculation theory functions as a motivational strategy to protect attitudes from change—to confer resistance of counter-attitudinal influences, whether such influences take the form of direct attacks, indirect attacks, sustained pressures, etc., from such sources as the media, advertising, interpersonal communication, peer pressure, and other temptations.

The theory posits that weak counterarguments generate resistance within the receiver, enabling them to maintain their beliefs in the face of a future, stronger attack. Following exposure to weak counterarguments (e.g., counterarguments that have been paired with refutations), the receiver will then seek out supporting information to further strengthen their threatened position. The held attitude or belief becomes resistant to a stronger attack, hence the medical analogy of a vaccine.

Houston Methodist Suspends Doc for 'Spreading Dangerous' Info

— Mary Talley Bowden, MD, says she will no longer treat vaccinated patients

by Kara Grant, Enterprise & Investigative Writer, MedPage Today November 16, 2021

Last Updated November 17, 2021

based ear, nose, and throat doctor, who has been a vocal opponent of vaccine mandates, was suspended from practicing at Houston Methodist

Bowden, MD, consistently used her [Twitter account](#) to promulgate the ivermectin and the "potential dangers" of the COVID-19 vaccines. It was not, however, that intensified the scrutiny already surrounding her.

Dr. Pierre Kory, president of the FLCCC Alliance testifies before Senate Committee on Homeland Security and Governmental Affairs looking into early outpatient COVID-19 treatment

"It will all be needless death from here on out, given that there is a readily available scientific solution to the pandemic," Kory says.

4 PROPAGANDA TECHNIQUES EVERYONE SHOULD KNOW

#1 Activate Strong Emotions

Propaganda plays on human emotions. Fear, hope, anger, frustration, sympathy - to direct people toward a desired goal. Propaganda is a mind game.

#2 Simplify Information and Ideas

Successful propaganda tells simple stories that are familiar and trusted, often using metaphors, imagery, repetition and short phrases to make them seem true and to substitute critical thinking.

#3 Respond to Needs and Values

Creating effective propaganda that appeals directly to the needs, hopes, fears of specific groups makes it personal and relevant and which also makes people pay attention and absorb information.

#4 Attack Opponents

Attacking opponents creates a "us-vs-them" mentality which suppresses the consideration of more complex information and ideas. People are naturally attracted to conflict which can serve as a form of political warfare to discredit people or groups.

As part of this effort, the Department of Justice is announcing today the largest amount of alleged fraud loss ever charged – \$4.5 billion in allegedly false and fraudulent claims submitted by more than 86 criminal defendants in 19 judicial districts around the country – related to nationwide schemes involving telemedicine: the use of telecommunications technology to provide health care services remotely.

OUR SERVICES

When Dr. Gold is engaged to consult for a patient, she does whatever is necessary to get the best answer for that patient. That includes reading the latest research, talking with multiple consultants, weighing the options, and presenting the choices and her final recommendation very clearly. When necessary and if desired, Dr. Gold will travel to accompany the patient to ensure every decision is the best decision.

Not every situation, or even most situations, require this level of attention to detail. But if you or a loved one is in a medical situation that would possibly benefit from the efforts of a brilliant physician-researcher-communicator, please contact us.

The charge for an initial inquiry/evaluation is \$5000. Dr. Gold rejects about 40% of inquiries as not benefitting from her extreme level of attention. If Dr. Gold recommends taking your case, the cost is typically \$25,000. For cases that require ongoing attention (one-six months) the cost is \$50,000.

For every patient Dr. Gold will find the best solution, communicate effectively with each patient's own physician to ensure that the optimum treatment is instituted, and take proactive steps to avoid errors during treatment.

Instructions and support!...

Using 1.87% Ivermectin Horse Paste

Using 1% Sterile Injection for Cows/Swi

1ml=100 lbs twice a day added to a drink

Other uses

Lay on your back and place 5 drops in bellybutton and let it absorb.

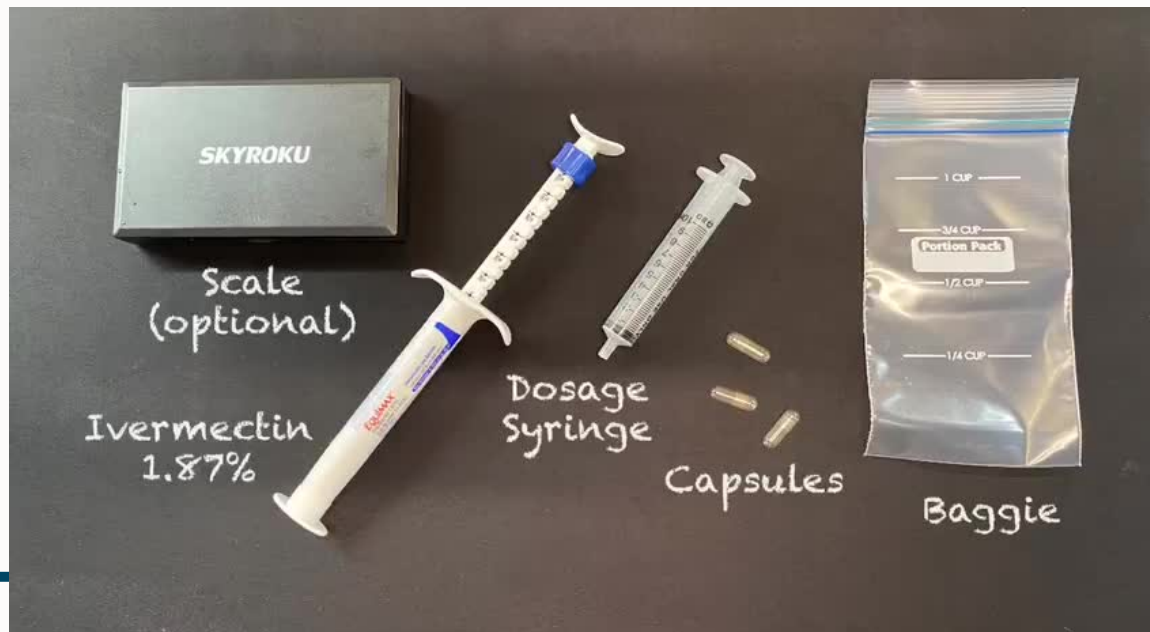

Rub on moles, skins tags, age spots, rashes.

Use Q-tips to swab inside your ears and nose. Rub on the arches of your feet.

Take twice a day by either placing on the back of your tongue and washing down with lemon water or loading in gel caps.

Continue protocol until "herxing" subsides (see pinned info on herxing).

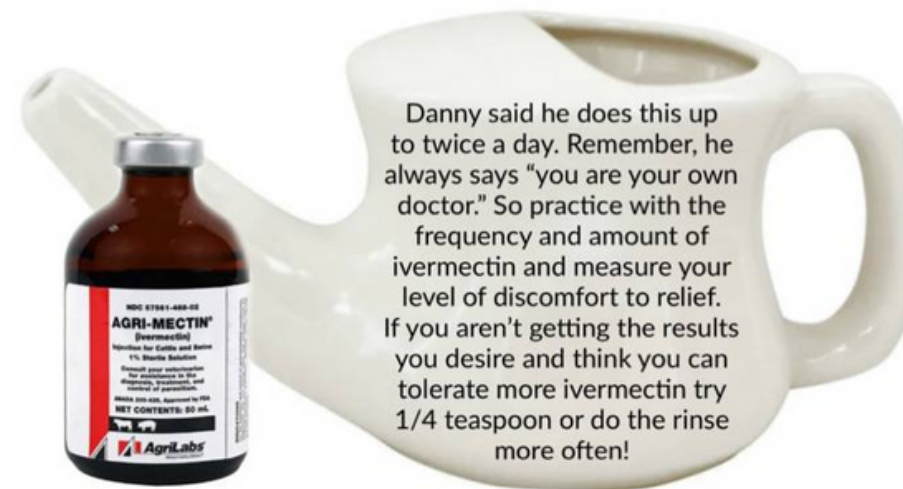

Drink plenty of lemon water and HCQ drink.

DANNY'S SUGGESTED Sinus Rinse Protocol

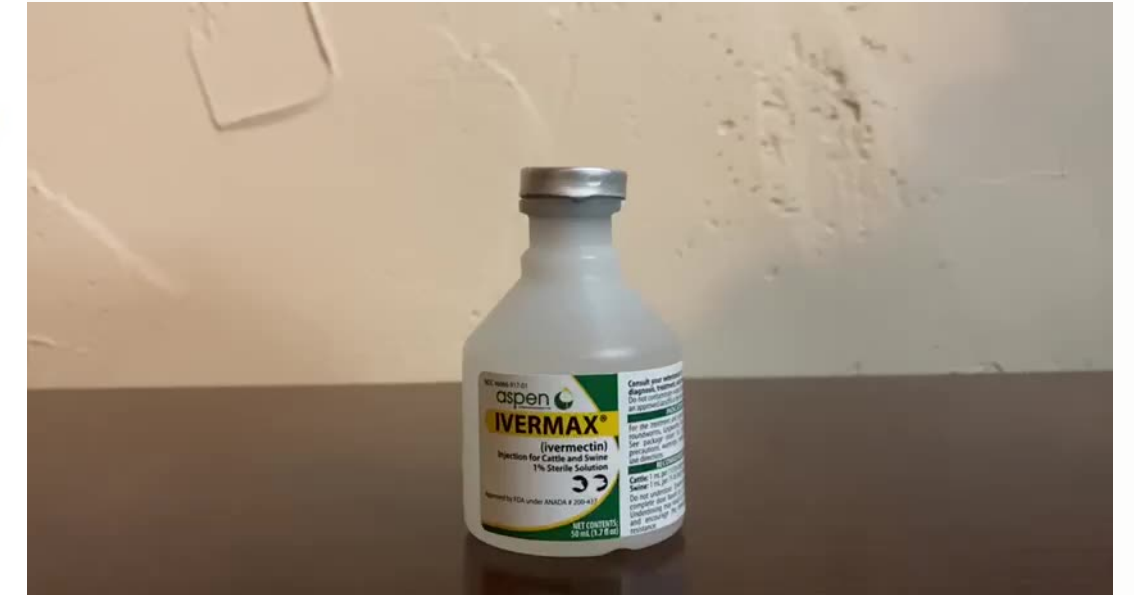

You can use either a neti pot or a sinus rinse kit (like NeilMed).

- 8 oz of warm water (distilled recommended)
- 1/8 teaspoon of 1% sterile solution liquid ivermectin
- Rinse each nostril with 4oz
- Repeat up to 2X's a day

Danny said he does this up to twice a day. Remember, he always says "you are your own doctor." So practice with the frequency and amount of ivermectin and measure your level of discomfort to relief. If you aren't getting the results you desire and think you can tolerate more ivermectin try 1/4 teaspoon or do the rinse more often!

<https://t.me/DirtRoadDiscussion>

DIRT ROAD EYEDROPS

- 1/8 tsp Kosher salt
- 2 tsps warm water
- 1/2 ml of 1% liquid injectable Ivermectin

*Can be stored in dropper bottle found in most health food stores or online.

<https://t.me/DirtRoadDiscussion>

PMID: 16751143 DOI: [10.1080/02652030600627206](https://doi.org/10.1080/02652030600627206)

Abstract

High-performance liquid chromatography (HPLC) with fluorescence detection was used for the quantification of ivermectin residues in bovine milk intended for human consumption. After liquid-liquid extraction of ivermectin and purification of the extract, the compound was derivatized with 1-methylimidazol in N,N-dimethyl formamide to form a fluorescent derivative, which was separated by HPLC, using reversed-phase C18, with methanol : water (96 : 4 v/v) mobile phase at a flow rate 0.7 ml min⁻¹. The excitation and emission wavelengths of the fluorescence detector were adjusted at 360 and 470 nm, respectively. The linearity of the method was in the range 10-100 ng ivermectin ml⁻¹. Based on a sample of 5.0 ml, the limit of detection and the limit of quantification for ivermectin in milk were 0.6 and 2 ng ml⁻¹, respectively. **The recovery rate varied from 76.4 to 87.2%, with an average of 77.9 +/- 3.2%, at four fortification levels. The inter-day precision of the method was 13% (n = 5). Of 168 samples analysed, 17.8% contained ivermectin above the limit of quantification.**

Nevertheless, none of the samples contained ivermectin above the maximum residue limit (10 ng ml⁻¹) established by the Brazilian Ministry of Agriculture.

Do you do on empty stomach or with food.
I found out that if i put the gel in water, the ivermectin grows and eats the corn oil base, so im not quite as worried about what i take it with.

I do try not to eat too much homemade sweetened stuff or that 20 carbs allowance right at dosing time bc i found there are some things that it grows extra fast in, alcohol tinctures Mama taught me to use external to begin with, we put ivermectin in a little bit and the stuff grew like wildfire. Wheat can apparently fuel both sides of the immune battle in early stages of detox, esp spirochete flareups.

So the little of that i use once far enough along to stick my toe into that, i make damn sure has homemade stuff parasites dislike and that the good bacteria and ivermectin like mixed with it. My period still kinda dietates that or im a feagy bitch

It's aaaaalllive!!

Danny L
Description

Herxing

Herxing is your body reacting to the die off of microbes (parasites). Herxing can mild or it can be a bitch!

Symptoms may include:

1. Flu like symptoms
2. Dizziness
3. Chills
4. Blurry vision
5. Headaches
6. Sweating
7. Fatigue
8. Hot flashes
9. Pain in certain parts of your body

Remember to drink your lemon water along with the HCQ drink. Herxing is different for everyone as well as how long you will herx. Push through, it's amazing on the other side. See you there!

Ivermectin Testimonies

Everything below is for PEOPLE ONLY on IVM aka Ivermectin and what it has Fixed, Cured or Improved.
President Trump stated there's something out there that cures 6000 different things. We believe it's Ivermectin. 🔥 FYI a / = aka 🔥

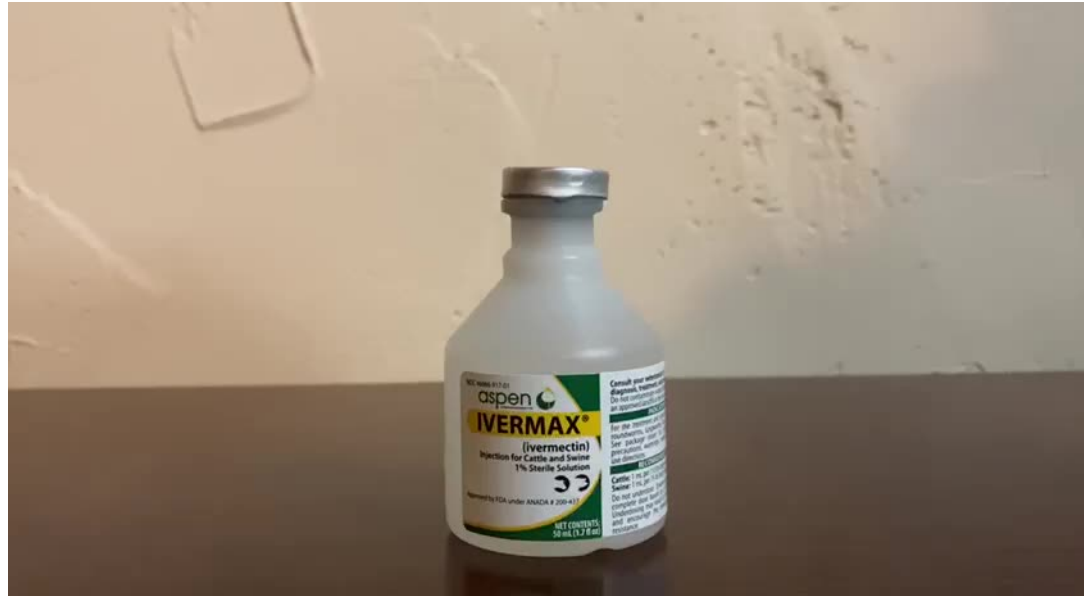

🔥🔥 Information was gathered from Listening to Dirt Road Discussions! You can find these under the music tab, after clicking on the Channel's title.

🔥🔥 Also, make sure you check out the Pinned 📌 messages, as these will help you as well! These are located at the top of his channel (on Android, they're in the upper right. Sorry, I don't know about Apple)🔥🔥

DON'T USE IF YOU'RE TRYING TO GET PREGNANT, CURRENTLY PREGNANT OR NURSING.

Kills parasites, bacteria, bacterium, tape worms, round worms, spirochetes

No issues with ivermectin, even if you have a mold allergy, can't overdose on it

Danny's Hydrochloroquin

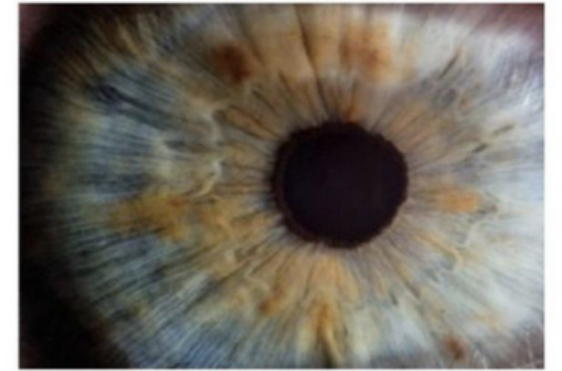

4 grapefruit 4 oranges
4 lemons 4 liters *water

1. Cut fruit into quarters leaving the peel on
2. Squeeze juices into pot and add fruit
3. Add 4 liters of water
4. Cover and simmer for 2 hours
5. Allow to cool, strain and store in refrigerator

Enjoy, drink as much as you like.
Pure vitamin C with Quinine.

*Well, spring, filtered or unsweetened quinine water may be used.

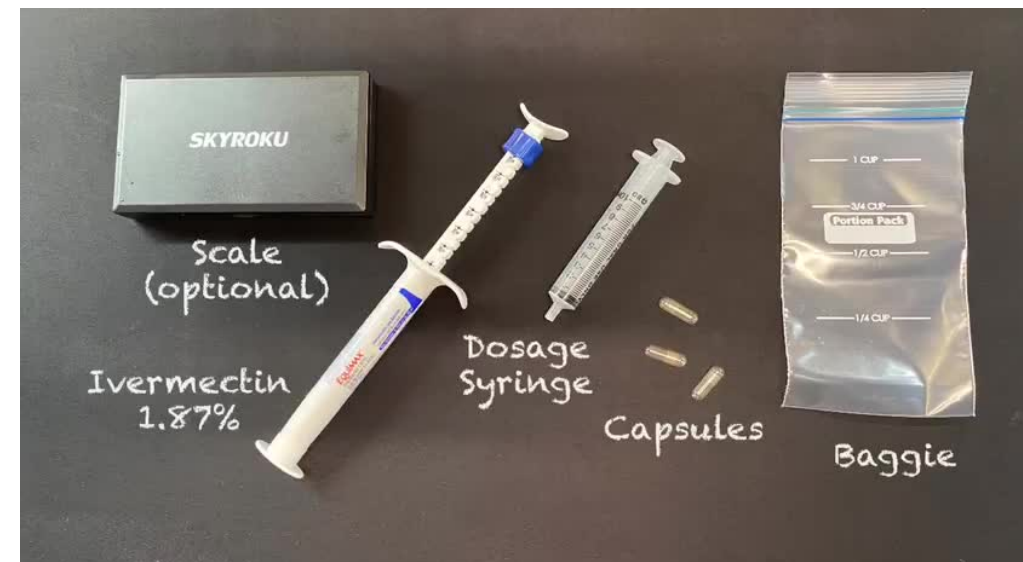

How are you supposed to do it?...

Dirt Road Eyedrops

1/8 tsp Kosher salt
2 tsps warm water
1/2 ml of 1% liquid injectable Ivermectin

*Can be stored in dropper bottle found in most health food stores or online.

So how's that working out for ya?

Nancy Brady

Yes, I, too, am having horrific pain where my original injuries were... I was 'always' in pain even since my injury 7 years ago but the pain is now intensified 100-fold!! (especially at night, during sleep; can't sleep because of the pain). I've been on IVM for almost six weeks.. has this happened to anyone else? If so, when did it subside?

25 7:08 AM

I have been on protocol since October. I have severe headaches. Taking calcium and iron but still bad. I also hear my heart beat in my ears.

I suffer from blood clots, anemia and high white blood cell count. My brother died at 30 of brain aneurism.

I'm 52 and have a 10 and 13 year old boys. I need to live and I'm scared. Anyone have a clue? Please put me at ease.

Angel of Truth and Love

Jennifer Fletcher

I have a question please. I was on just ivm for... Equimax made my hair fall out. Once I switched to plain ivermectin it stopped. Way too strong I would stick with plain ivermectin. Just my opinion. Infinite Love & Gratitude 🧡

7:10 PM

Starseed Truth Warrior

NC

Yes, I'm also experiencing short of breath on and off with ivermectin. Initially it was helping with my shortness of breath but now off and on shortness of breath. Also chest feels weird and heavy like with a little anxiety, I don't know. Also very tired, dizzy and extremely weak. I believe I have POTS too. I've been on and off ivermectin for long Covid before I heard about this group. Now I'm going through protocol since I just joined this group. It's been about a month.

I have take d-mannose in the past. I looked it... Because I can't remember anything and ivermectin has not helped this, I don't remember where I read this. I have been 2 months clear from uti since I started. Lots of testimony about d-mannose helping. 6:02 AM

Bronson
Harley Joe
Hey Bronson glad to have you aboard „can you... Just experiencing herxing... it seems like a lot is mental. Just don't feel that great and like being very social.. libido is very low after starting IV. Just looking forward to the herxing subsiding... I've gone through 3.5 tubes so far (only able to tolerate 1 eraser per day) 12:52 PM

14 months on protocol and my asthma is reall...
The same exact thing happened to me! My childhood asthma had been a non-issue for 10 years and after being on ivermectin it came back and I needed inhalers that I hadn't used in years. So I stopped ivermectin because in my opinion it was defeating the purpose if it was making me take big Harma inhalers. I'm super healthy otherwise and haven't taken big harma anything in 3 years. As soon as I stopped the ivermectin my asthma went away again. Just recently I started taking 1% ivermectin topically morning and night (mainly for vanity LOL wrinkles and such). It's been about two months maybe and so far so good. I don't know why that happened with my asthma but I'm wondering if I was doing too much ivermectin? IDK! It's a mystery. edited 2:13 PM

Update on my husband. Intensive care unit has stated that my husband had a reaction to his thyroid medication and his Xanax along with the ivermectin. We've been following Danny's protocol and weaning off all medication. However, my husband had severe hallucinations Tuesday night. I just wanna let you know his heart rate dropped to 45 last night, and there is no change. As much as I want to get him out of the hospital I cannot with the condition he's currently in. He needs to be monitored very carefully. Please continue to send prayers my way. You all don't know how much I miss Danny and being able to speak to him. I know Danny and the Lord are looking down and guiding us all through our illnesses. But what I saw in my husband was horrific. Please pray that he can be well enough to that they can

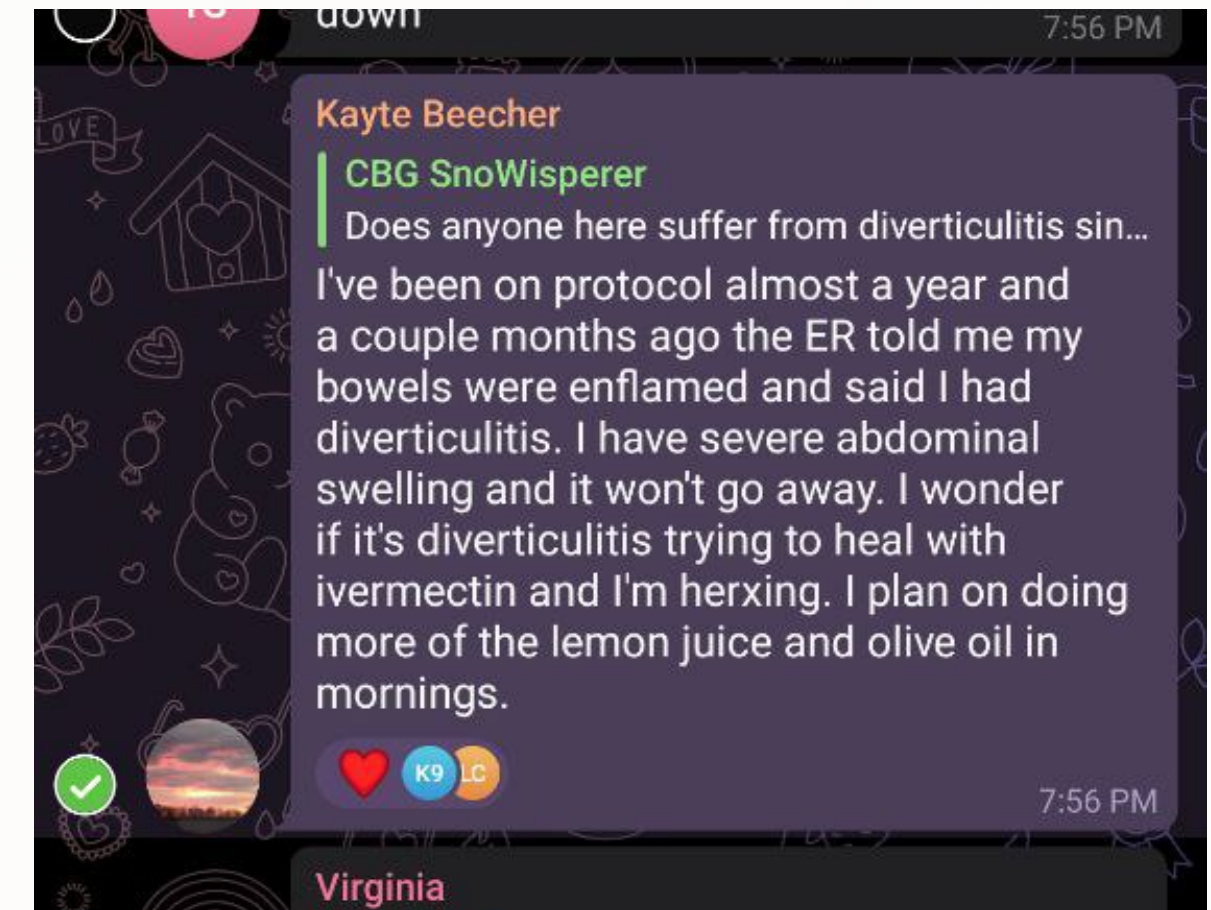

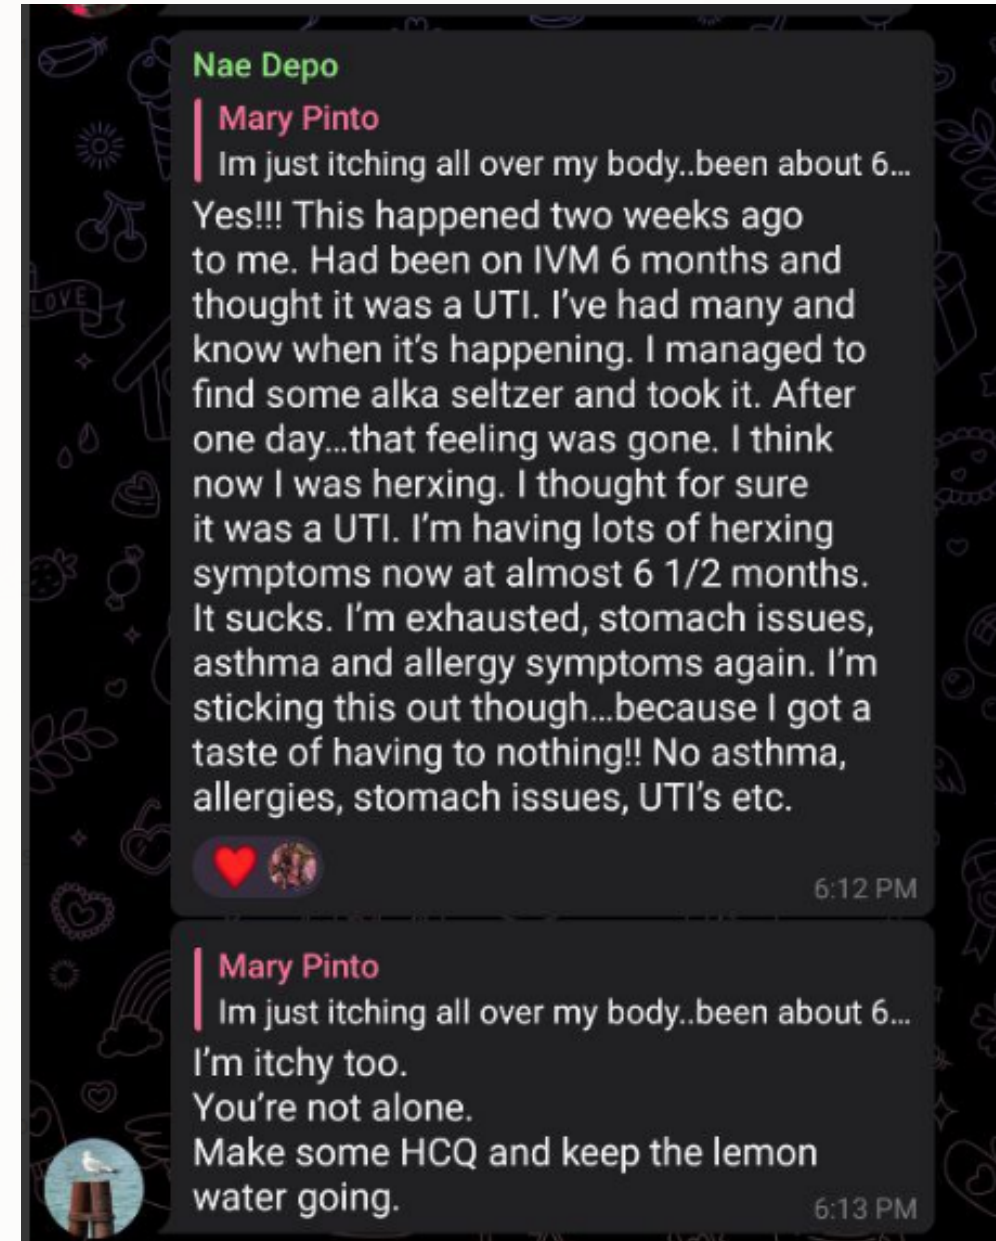

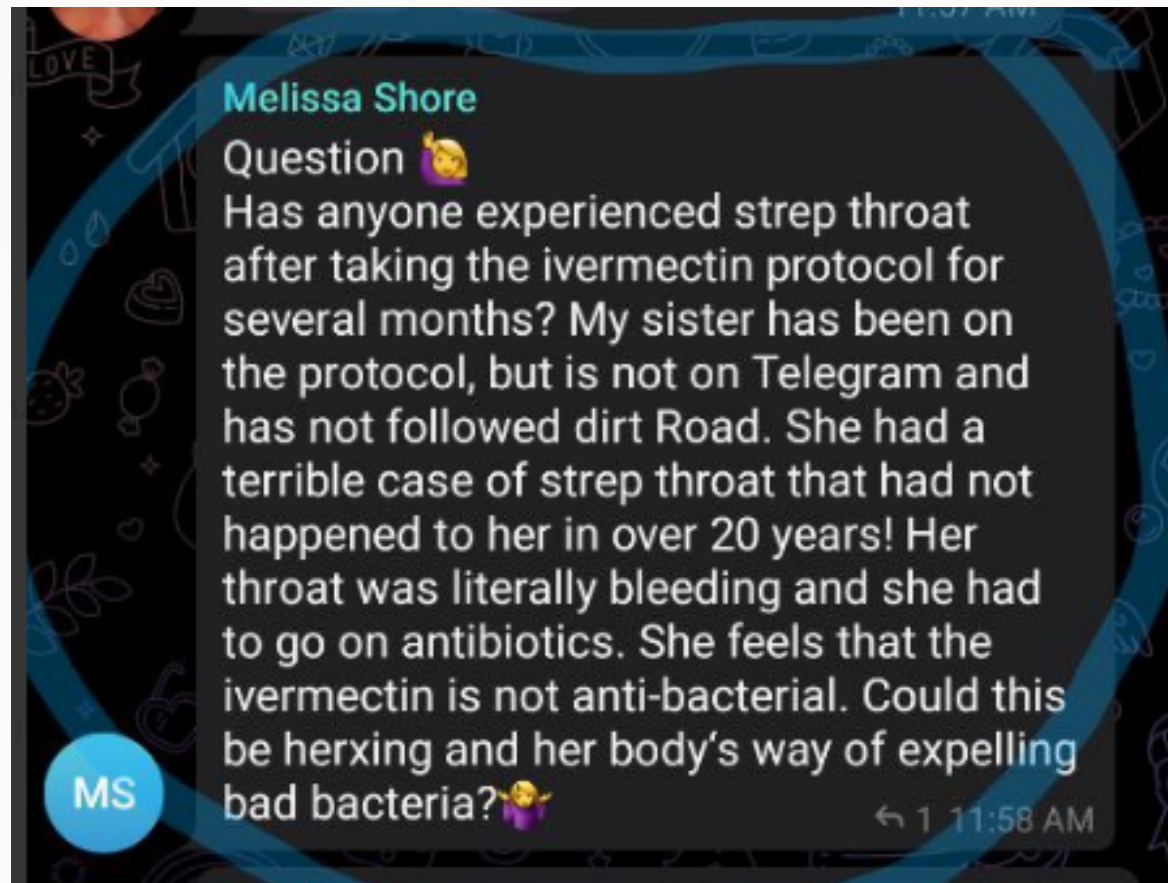

Mrs. Ellen Griswold 🇺🇸
It's with a heavy heart that I'm posting that my 81 year old Dad left this world this morning around 8 am. Starting the protocol on 2/14/23 just wasn't enough time to help him, and he had been in horrific pain with peripheral vascular disease and was scheduled to have part of his leg removed next week. He went in his sleep, and he's finally at peace and out of pain. Wish I had known his medical issues a year ago so we could have had more time for it to work, but it just wasn't to be. Thanks for all of your support over the past few weeks as I desperately searched for his miracle.

So How's that working out for everyone?

● Dirt(Nap) Road Discussions

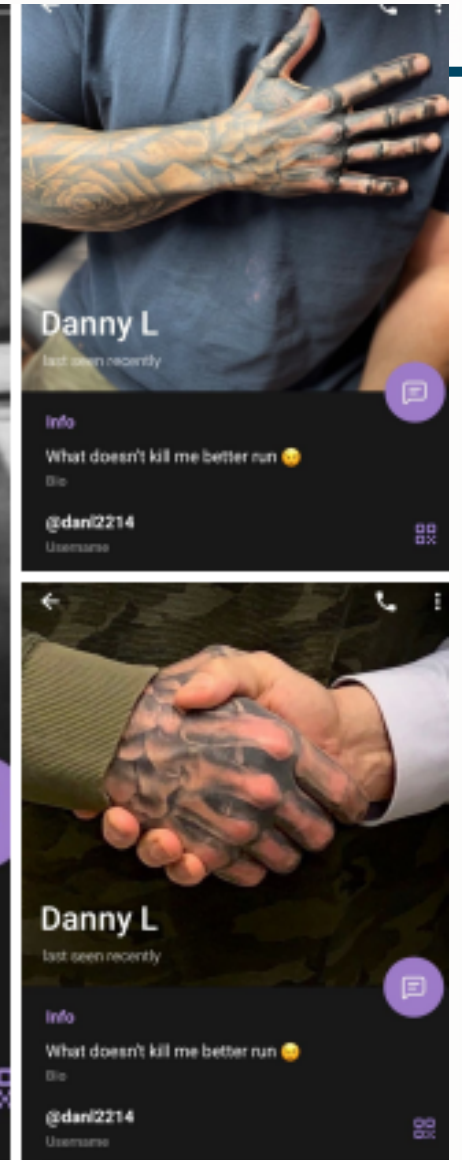

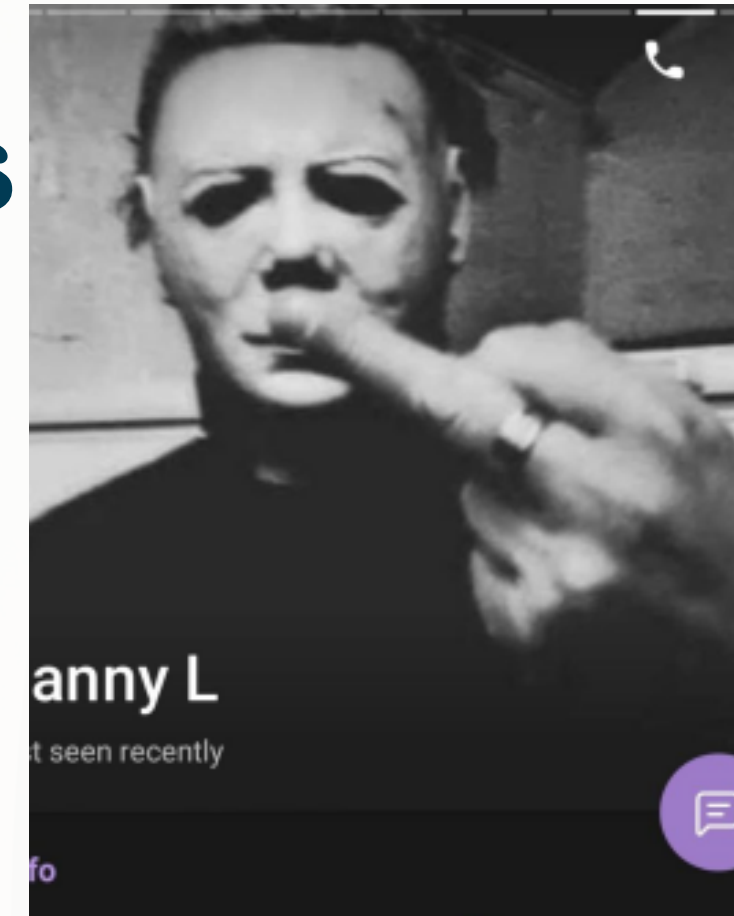

So How's that working out for everyone?

An Ivermectin Influencer Died. Now His Followers Are Worried About Their Own 'Severe' Symptoms.

Danny Lemoi took a daily dose of veterinary-grade ivermectin and told his thousands of followers to give the drug to children. He died of a common side effect of the medication.

vice

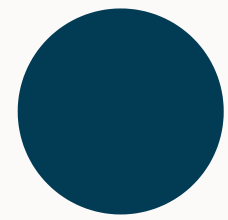

IVERMECTIN KILLZ

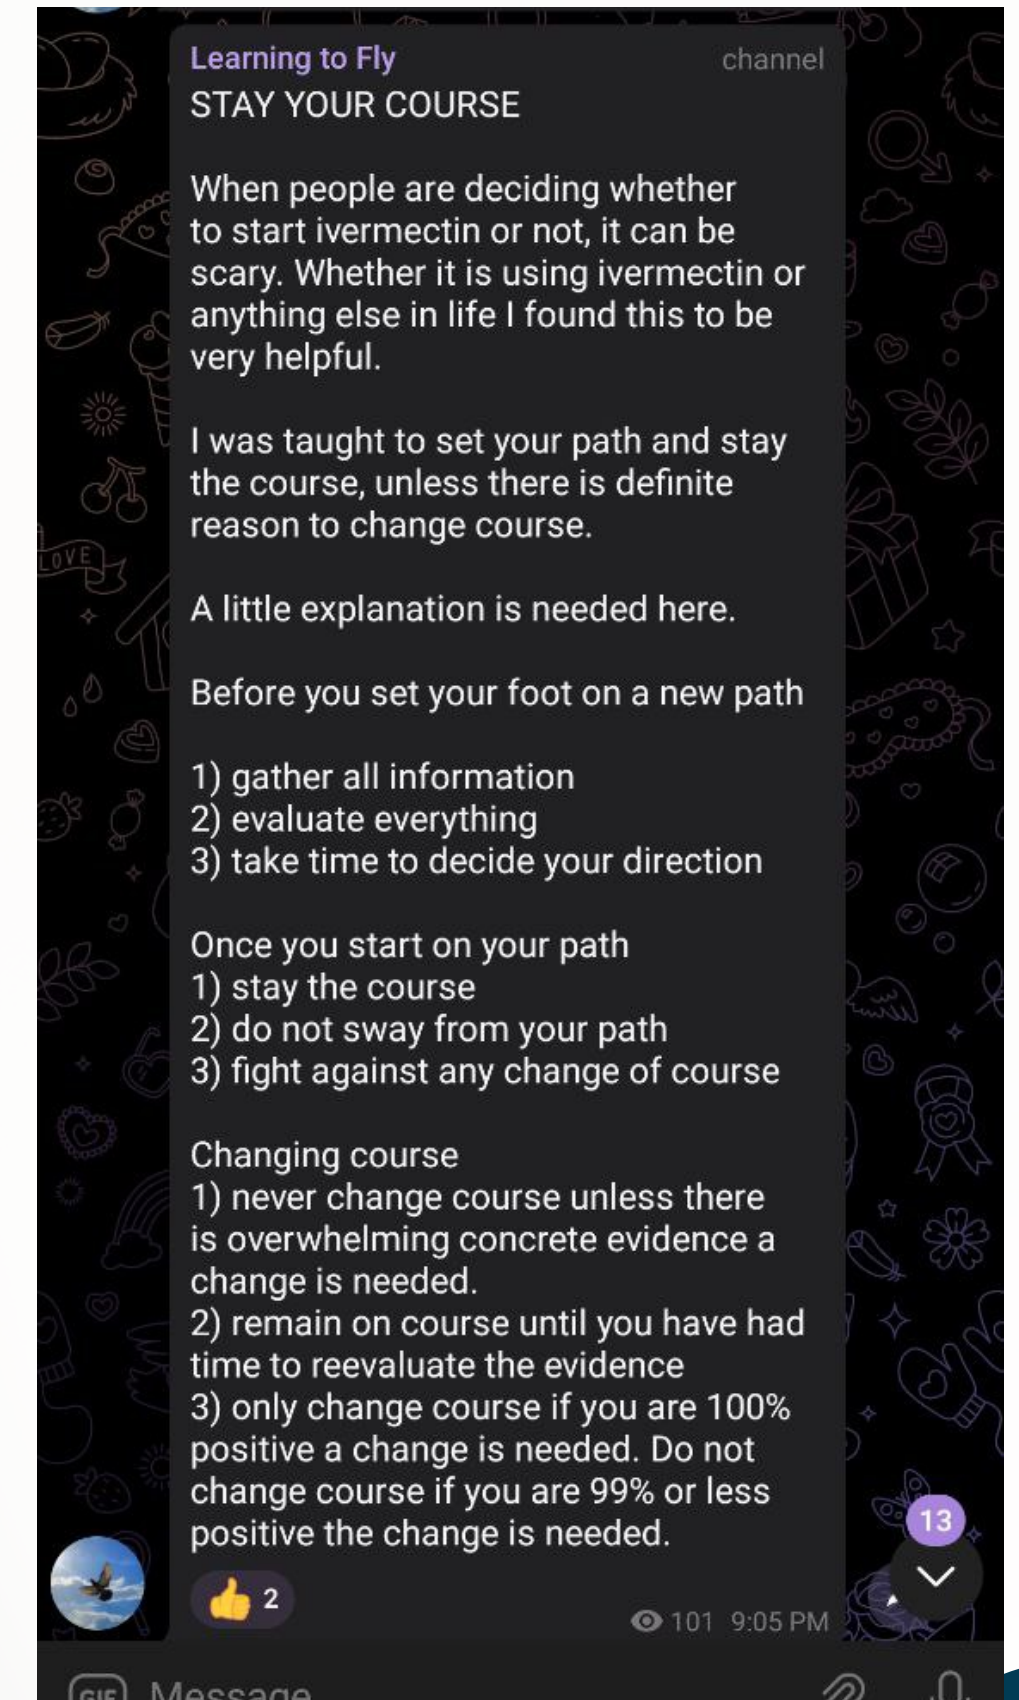

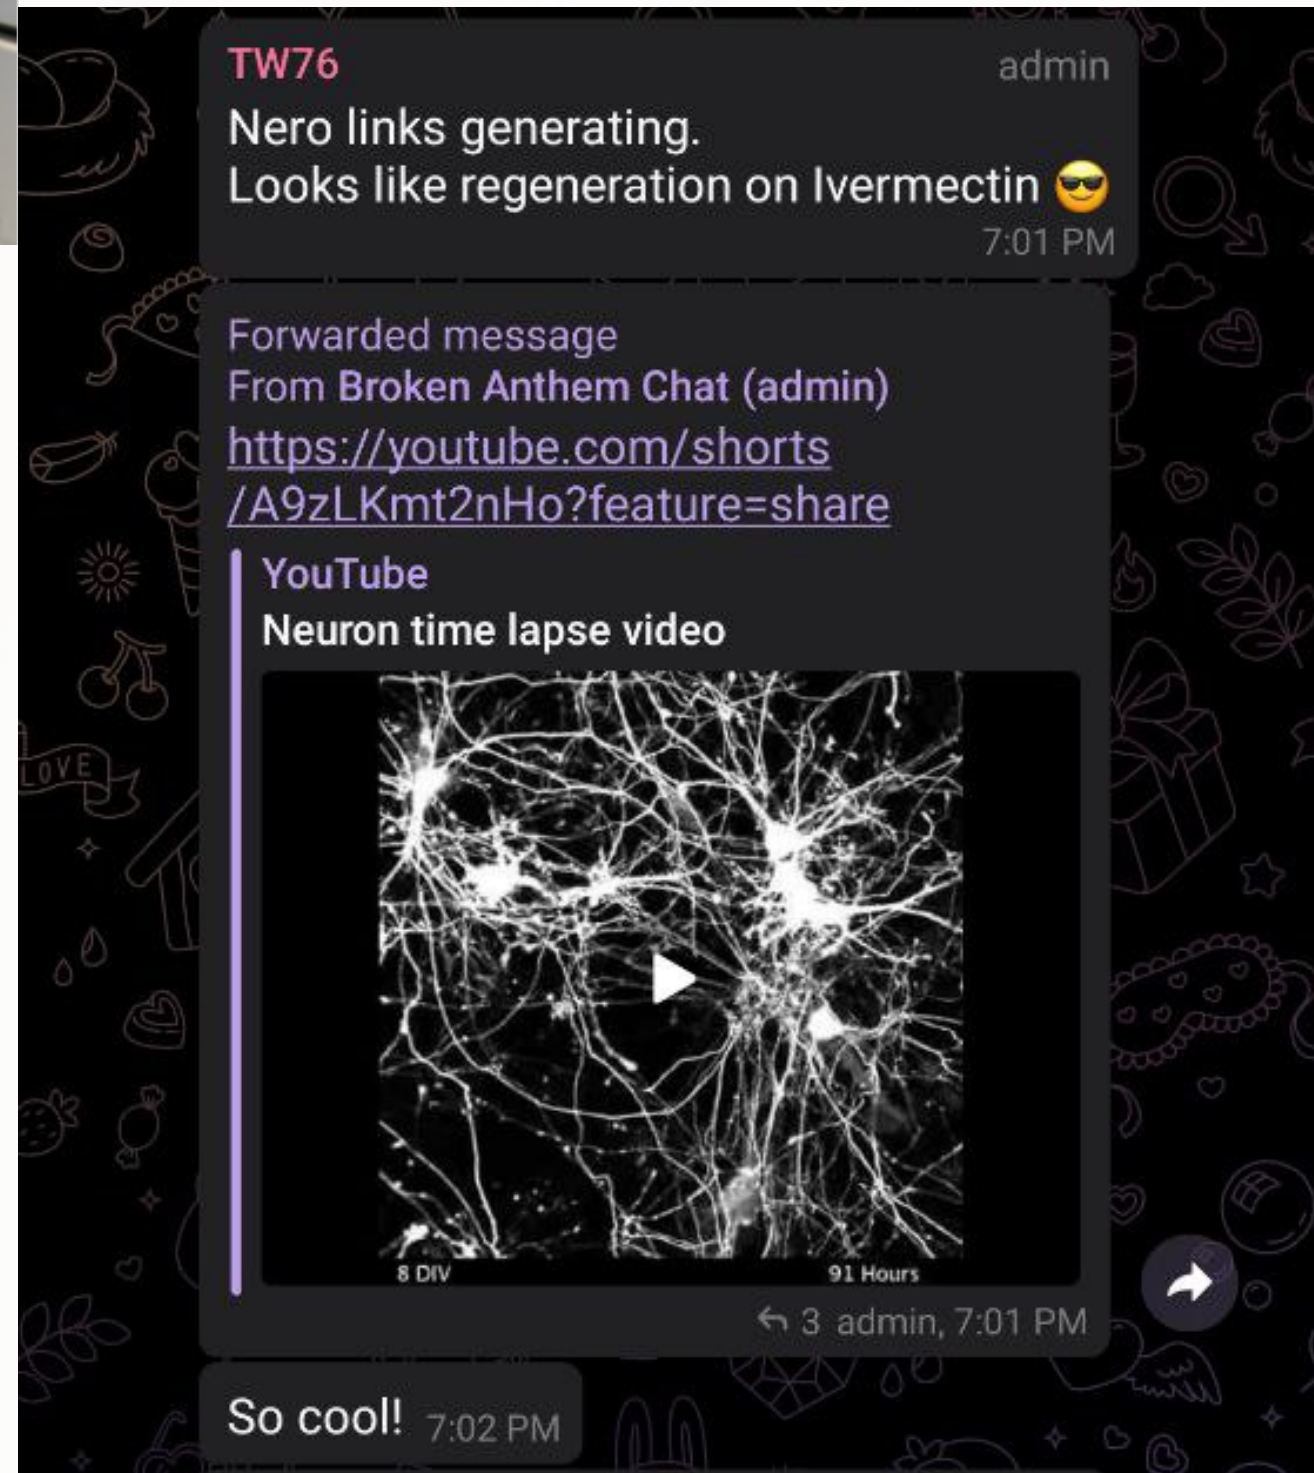

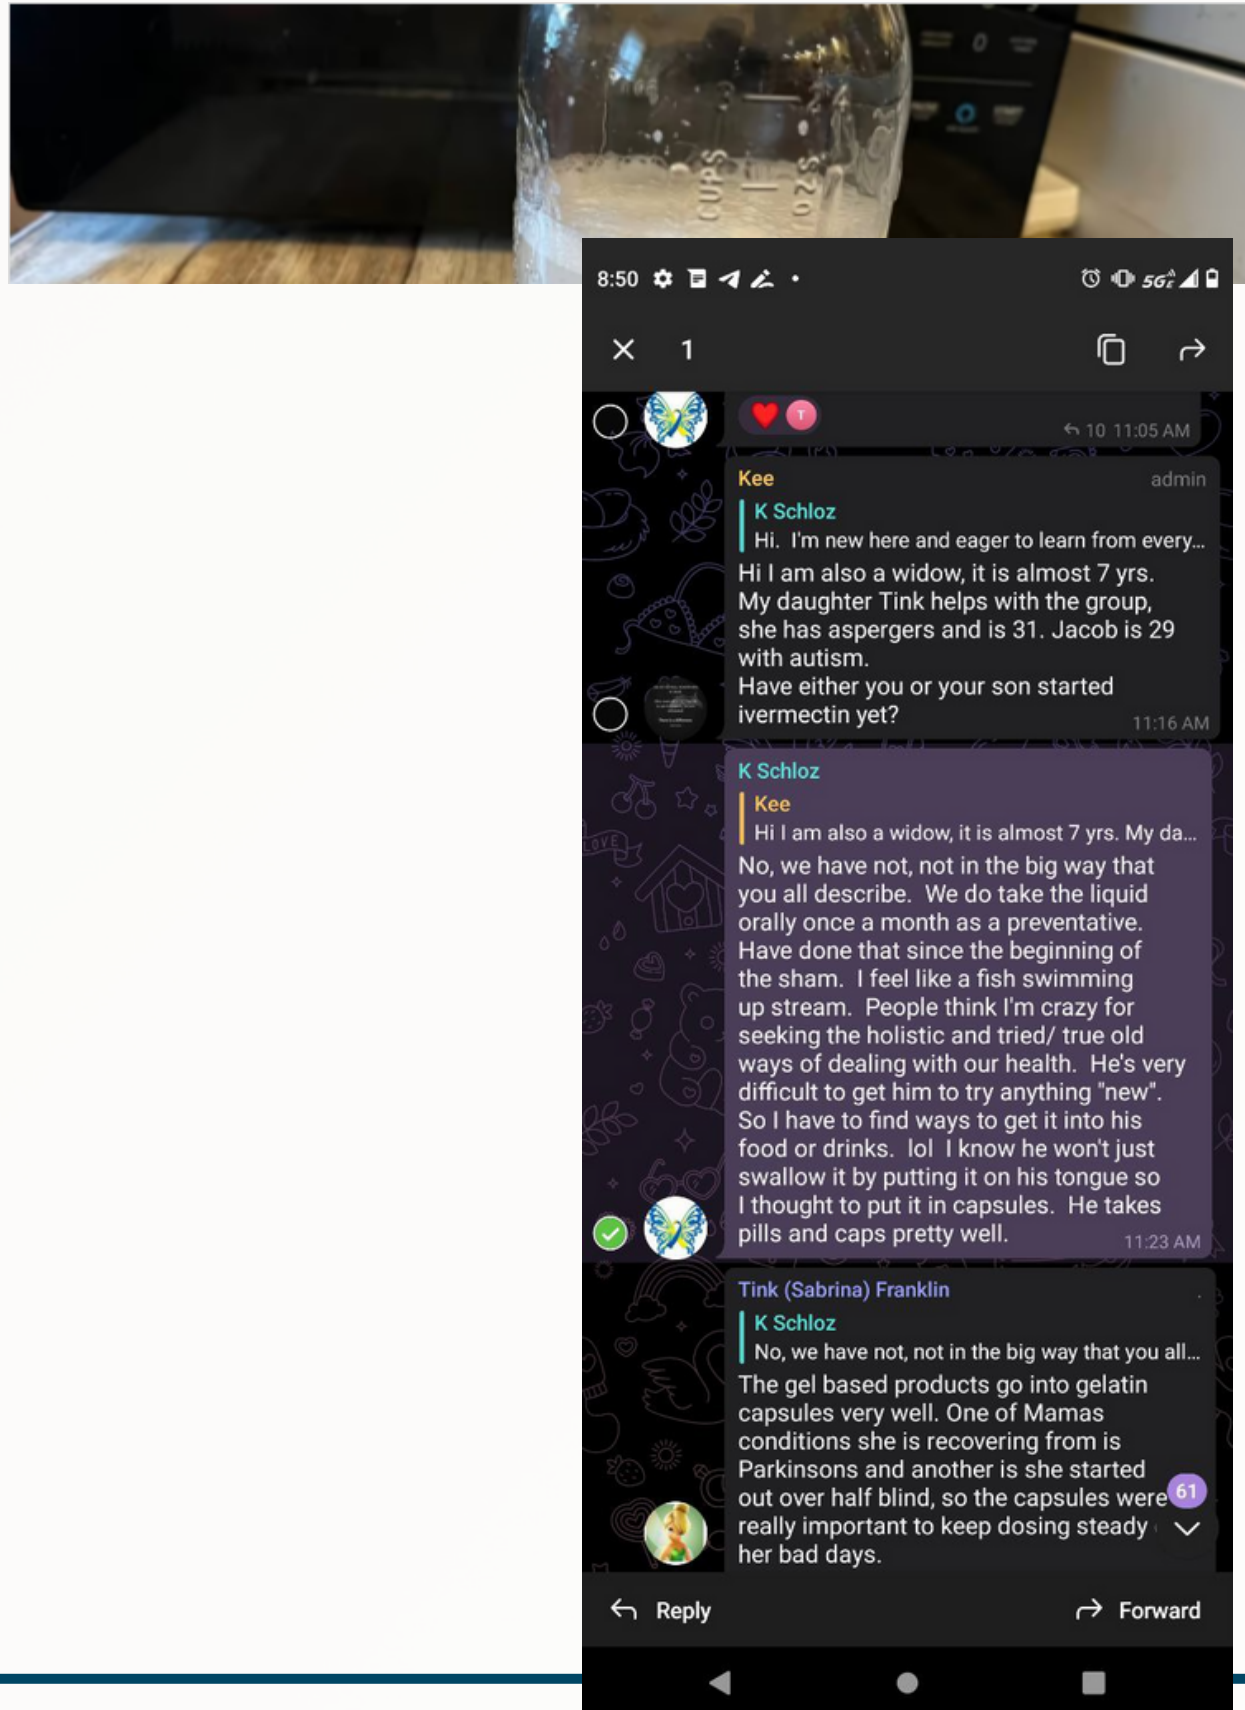

Forwarded from Dirt Road Discussions

It's with a heart too heavy to bear that we at Dirt Road Discussions must let everyone know that the tenacious, compassionate and one-of-a-kind Danny we've come to know and love so much was summoned by God to move his faithful services to Heaven. Danny passed away unexpectedly this past Friday, March 3rd.

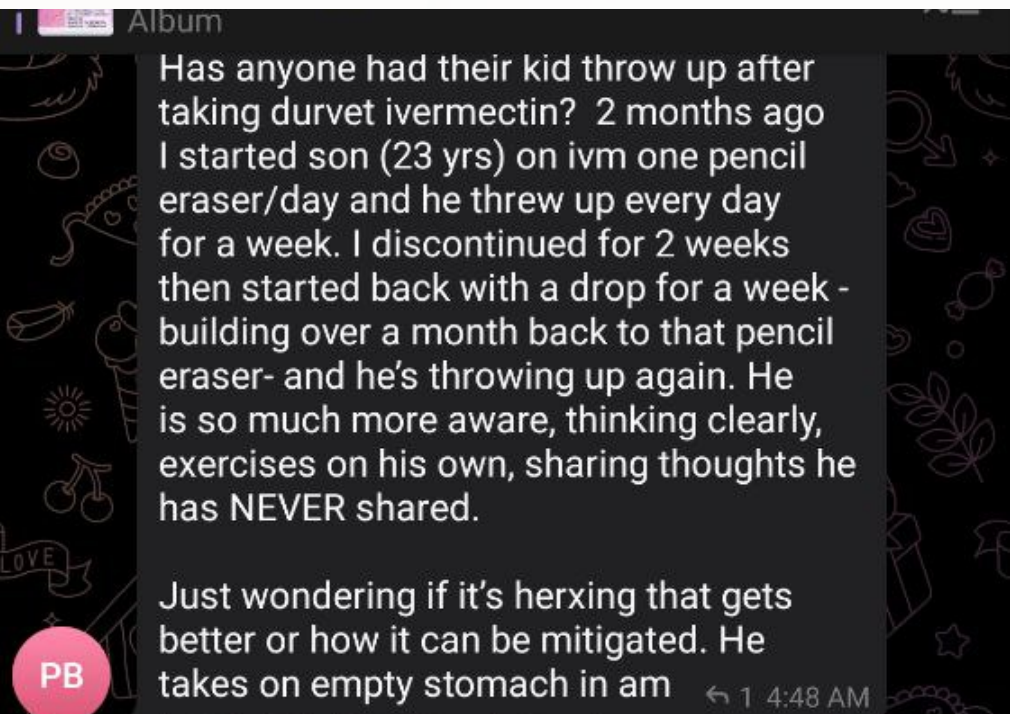

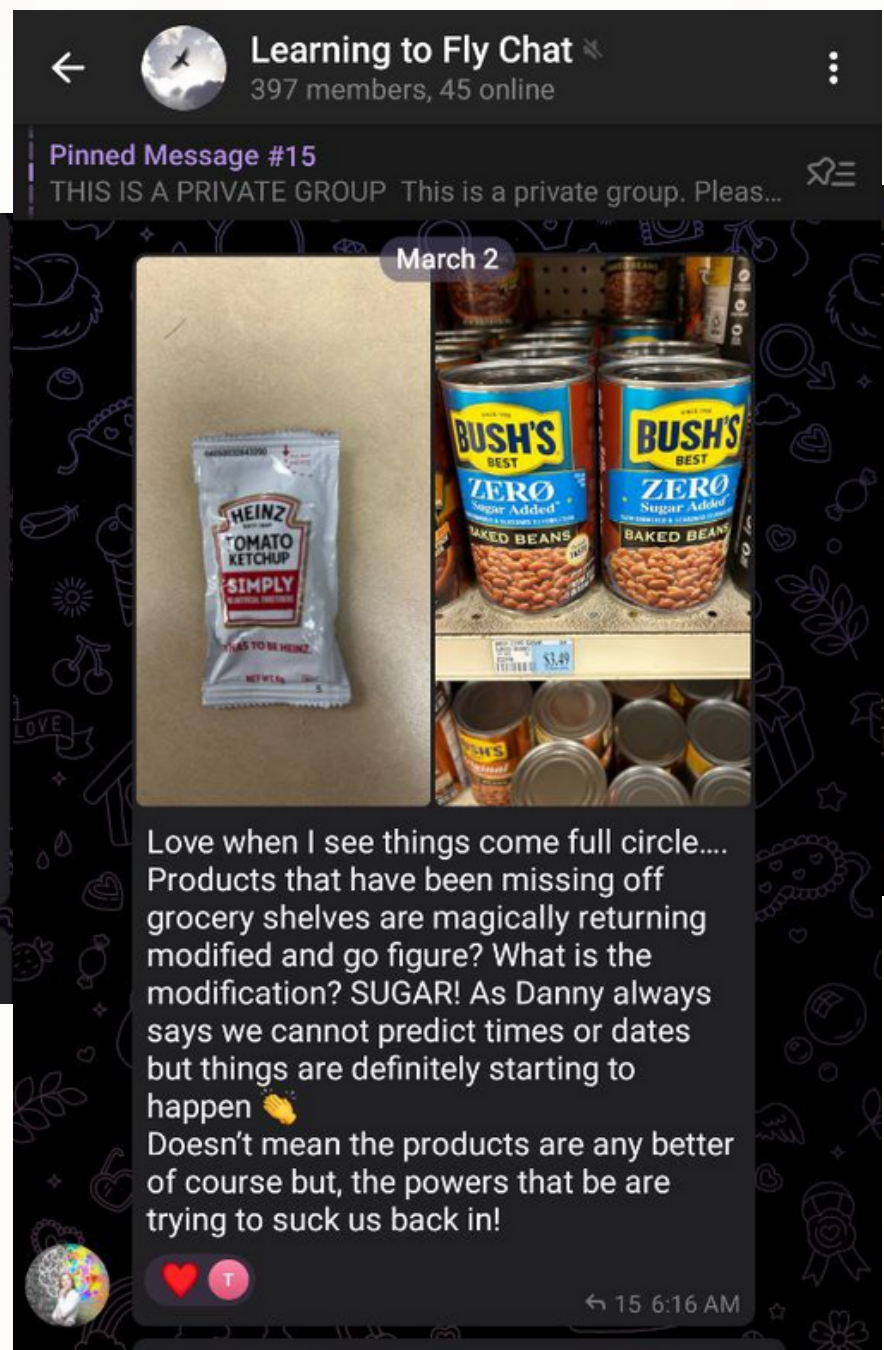

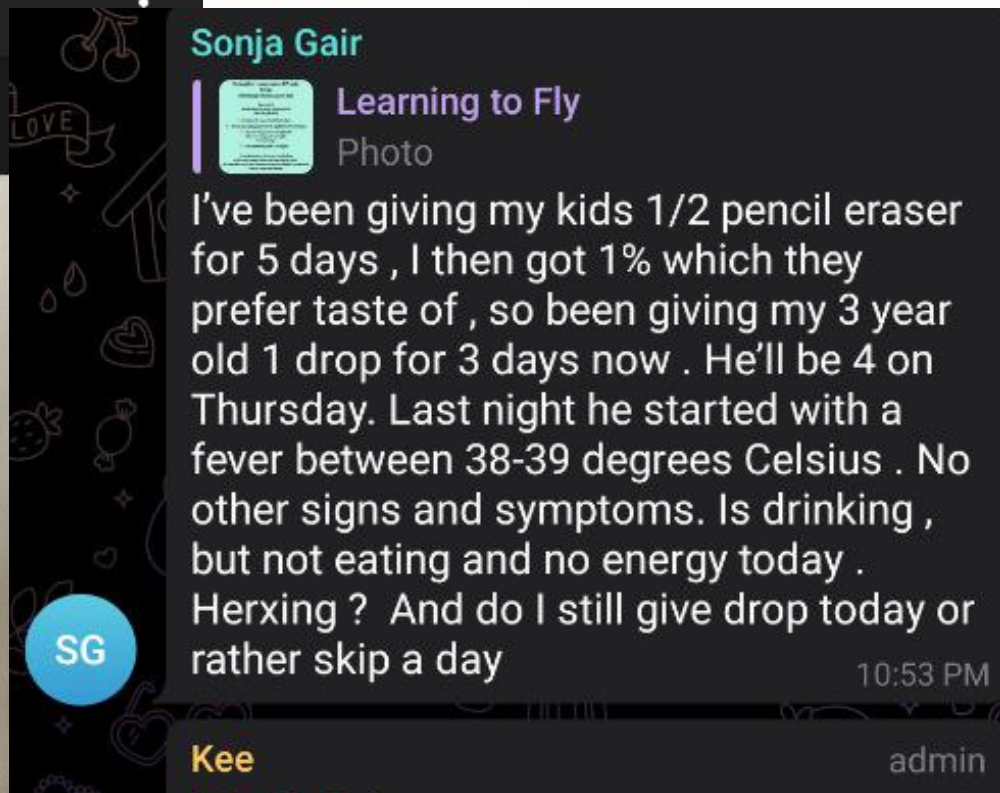

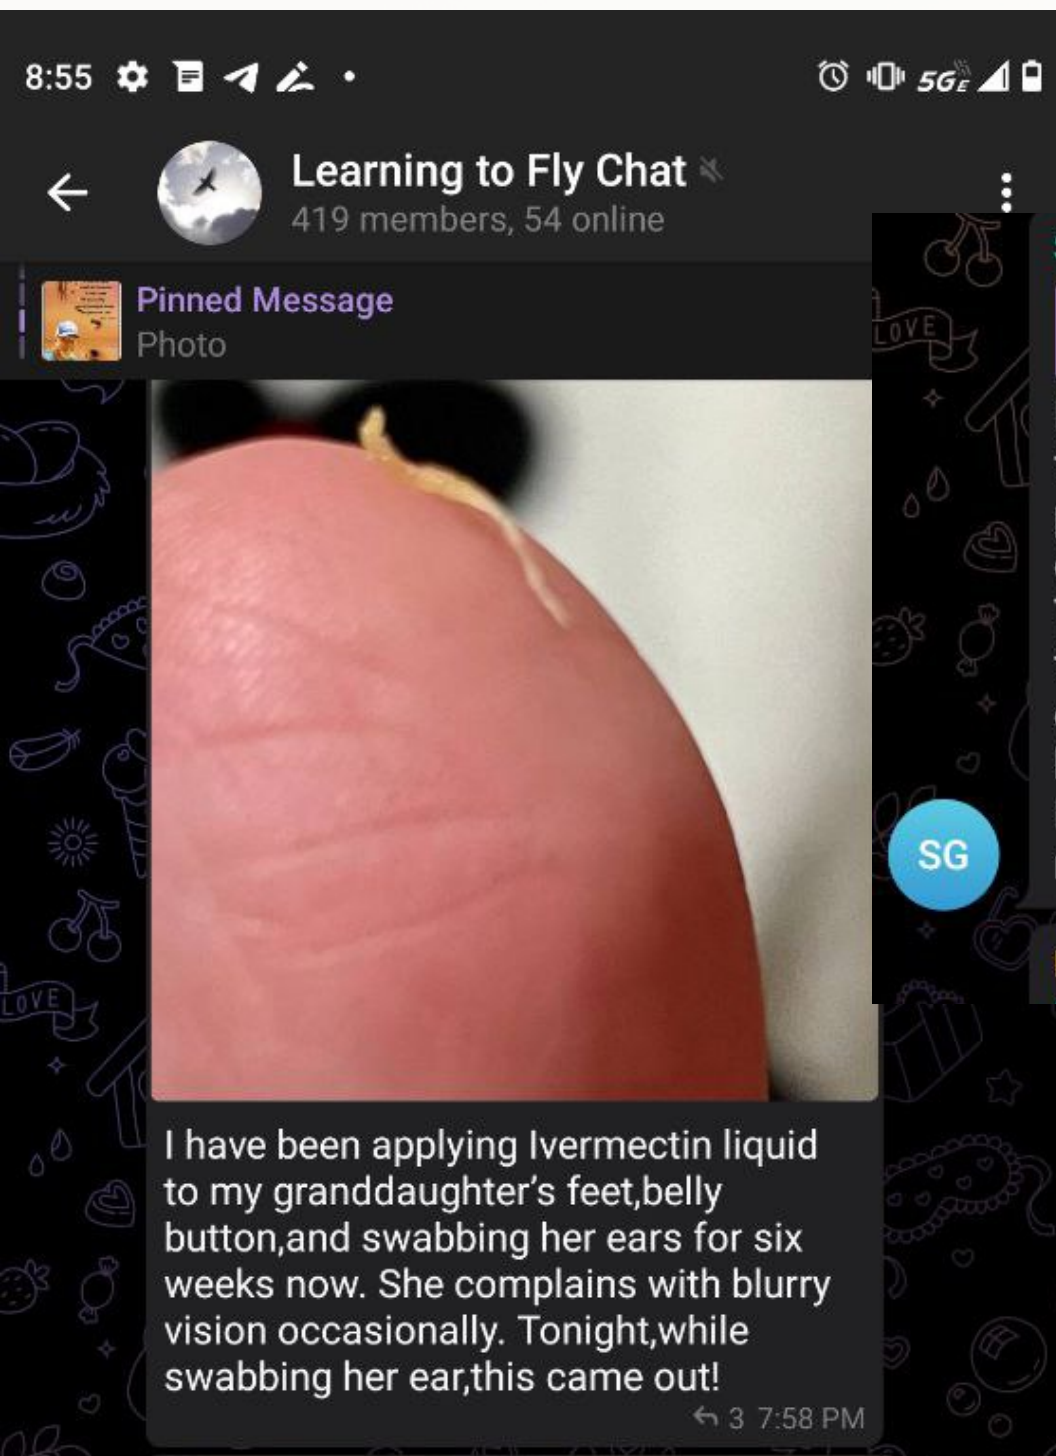

We understand that this is going to raise questions for those who were following him. Though it was obvious that Danny had the biggest heart, it was unbeknownst to him that his heart was quite literally overworking and overgrowing beyond its capacity- nearly doubled in size from what it should have been. Yes, he had labs done as recently as last year and because they raised no red flags, no further testing was believed to be necessary. Danny was fully convinced that his heart had regenerated after his incident with Lyme Disease that almost ended in congestive heart failure 3x nearly 6 years ago- however, a family history of heart disease and chronic stress had been silently working against his best efforts to maintain his health. All of his other organs were unremarkable, and this was determined to be a death by unfortunate natural causes.

Where can I find info on seizures? Is there a particular chat where Danny mentions it
12:39 PM

TW76
Mom of 5
Has anyone been seeing seizure activity since...
Seizures are tricky because a headacje can be considered a mild seizure.
Basically seizures are caused bt parasites getti g deep into our bodies and brain.
So clearing them out can also cause seizures. This is why slow & steady is so important.
12:49 PM

Linda Parichy
Where can I find info on seizures? Is there a pa...
Danny talks allot about grounding to help with seizures in many chats especially the chats with Kee.
12:54 PM

My son was only 10 months old when he was diagnosed, we just completed 7 months of the intensive chemotherapy, and now have 13 months of maintenance chemo treatments till we are done. Maintenance means no more hospital stays, and all visits are out-patient!. Praise God for that, and hopefully the hospital doesn't give us any more surprises.

Finding a safe way to dose him daily and sneak it in at the hospital was key. Here's what we did...

- synthetic pill crushed and mixed into food 0.2mg/kg at breakfast.
- small dabs of the coconut oil IVM paste (the DRD recipe) on rashes when needed.
- 5 drops of liquid IVM in his nightly bath. Would energize him a bit but felt it was a key factor in faster recoveries.
- 3 drops of liquid IVM in water to drink from throughout the day.
- currently replacing synthetic pill with actual paste. For his weight it comes to 1/50 of a .21oz tube of paste mixed into his breakfast.

Note that I always rounded down with dose amounts and watched his reaction like a hawk. For his age I expected minimal herxing, if any, but figured chemo would be the primary target of detoxing. So getting him the anti-inflammation aspect of IVM far outweighed any of my worries of herxing.

The frustrations of being locked into the hospital "protocols" no matter how

Hi all i was wondering if i can pick your brains. My son 10 has pans from bart mold etc. When he has an episodes tons and tons (cuploads) of mucous and saliva will come up. He calls it his slime. It is shimmery. Some dried on a window screen and iy was viscous and flaky covering the screen holes. I feel like this is a big clue. Ive asked so many practitioners. Anyone here have any ideas what iy could be? Biofilm? Gut infection?
2 7:19 PM

Shana
Hi all i was wondering if i can pick your brains....
Jacob and I get this, our dog gets it horrible. This is part of what Danny called coughing up dishwashers and Volkswagens.
Jacob on a bad day will cough up a cup or so, I probably do about half. But our 25 pound dog will leave trails all over my kitchen as well as foot wide puddles. God help you if you don't see it in time, you'll end up sliding. It used to have the rainbow shine to it occasionally but it no longer does anymore and it doesn't seem as thick on any of us.
For us, even the dog, our faces have changed where our sinuses have lost all that swelling but some of it did come from my throat. If you listen to the chats Danny did with our group you can hear my throat is not in good shape. My daughter and I also get some from our girl parts. My son did have some of this when his

Hi All. I debated a while before deciding to post this. My son was diagnosed with Autism in October 2022 he's 3 years old. I knew something was up with him so I started the protocol in September 2022 initially with the coconut oil and ivermectin on his feet then gradually giving him the paste just once in the evening.

He has started since just before Christmas having seizure like episodes weekly and it ended up 2 weeks ago he was unconscious for 10 hours after collapsing at nursery.

He is still in hospital now with the doctors interrogating me daily asking have I given him any drugs and I feel terrified to tell them about the ivermectin. They have been saying all sorts of theories that he isn't autistic that he has a genetic disorder despite having a thorough assessment. I have dared not carry on with the paste in case I'm "caught out" but I'm now worried to continue when he's discharged.

He has been having the honey daily and lemon drink daily but I have stopped all of that since Christmas as he hasn't been home.

Please can I have some advice? I guess seizures are common in kids with autism anyway?

← 36 9:43 AM

Deleted Account

Kee

Seizures are common with autism yes. Did they run any test? MR...

They have done an MRI, EEG and constant blood tests and kept him in for observation. Nothing had come up on the tests and they have said they are baffled. I feel like they are watching me as no seizures whilst in hospital but he has had them weekly with me since Christmas

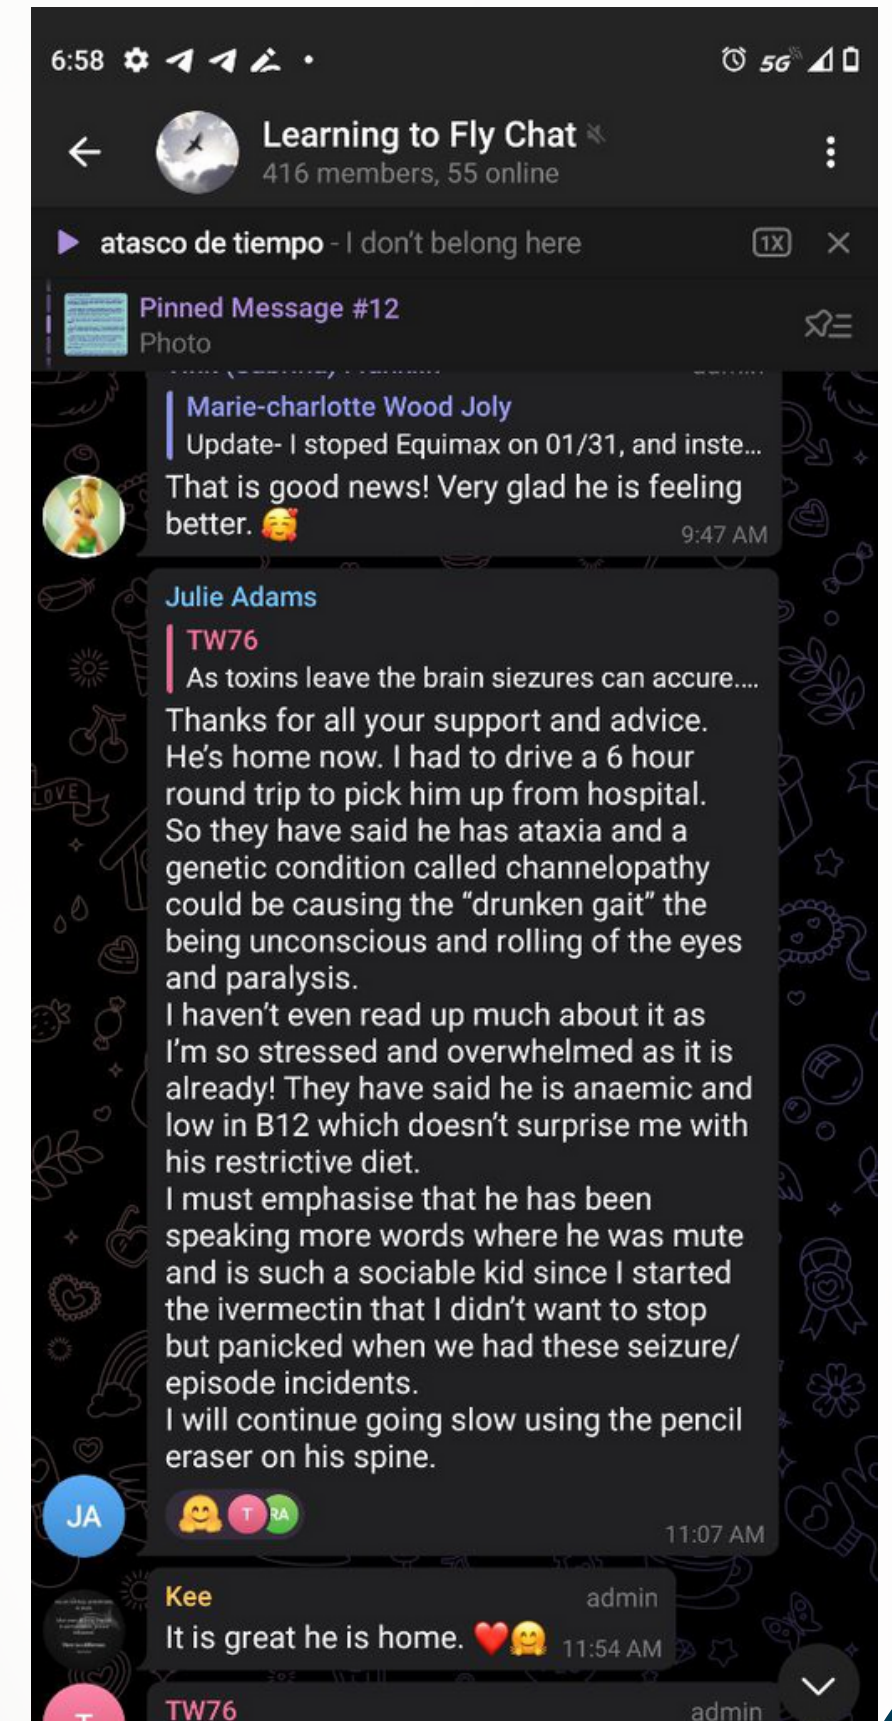

12:21 PM

Deleted Account

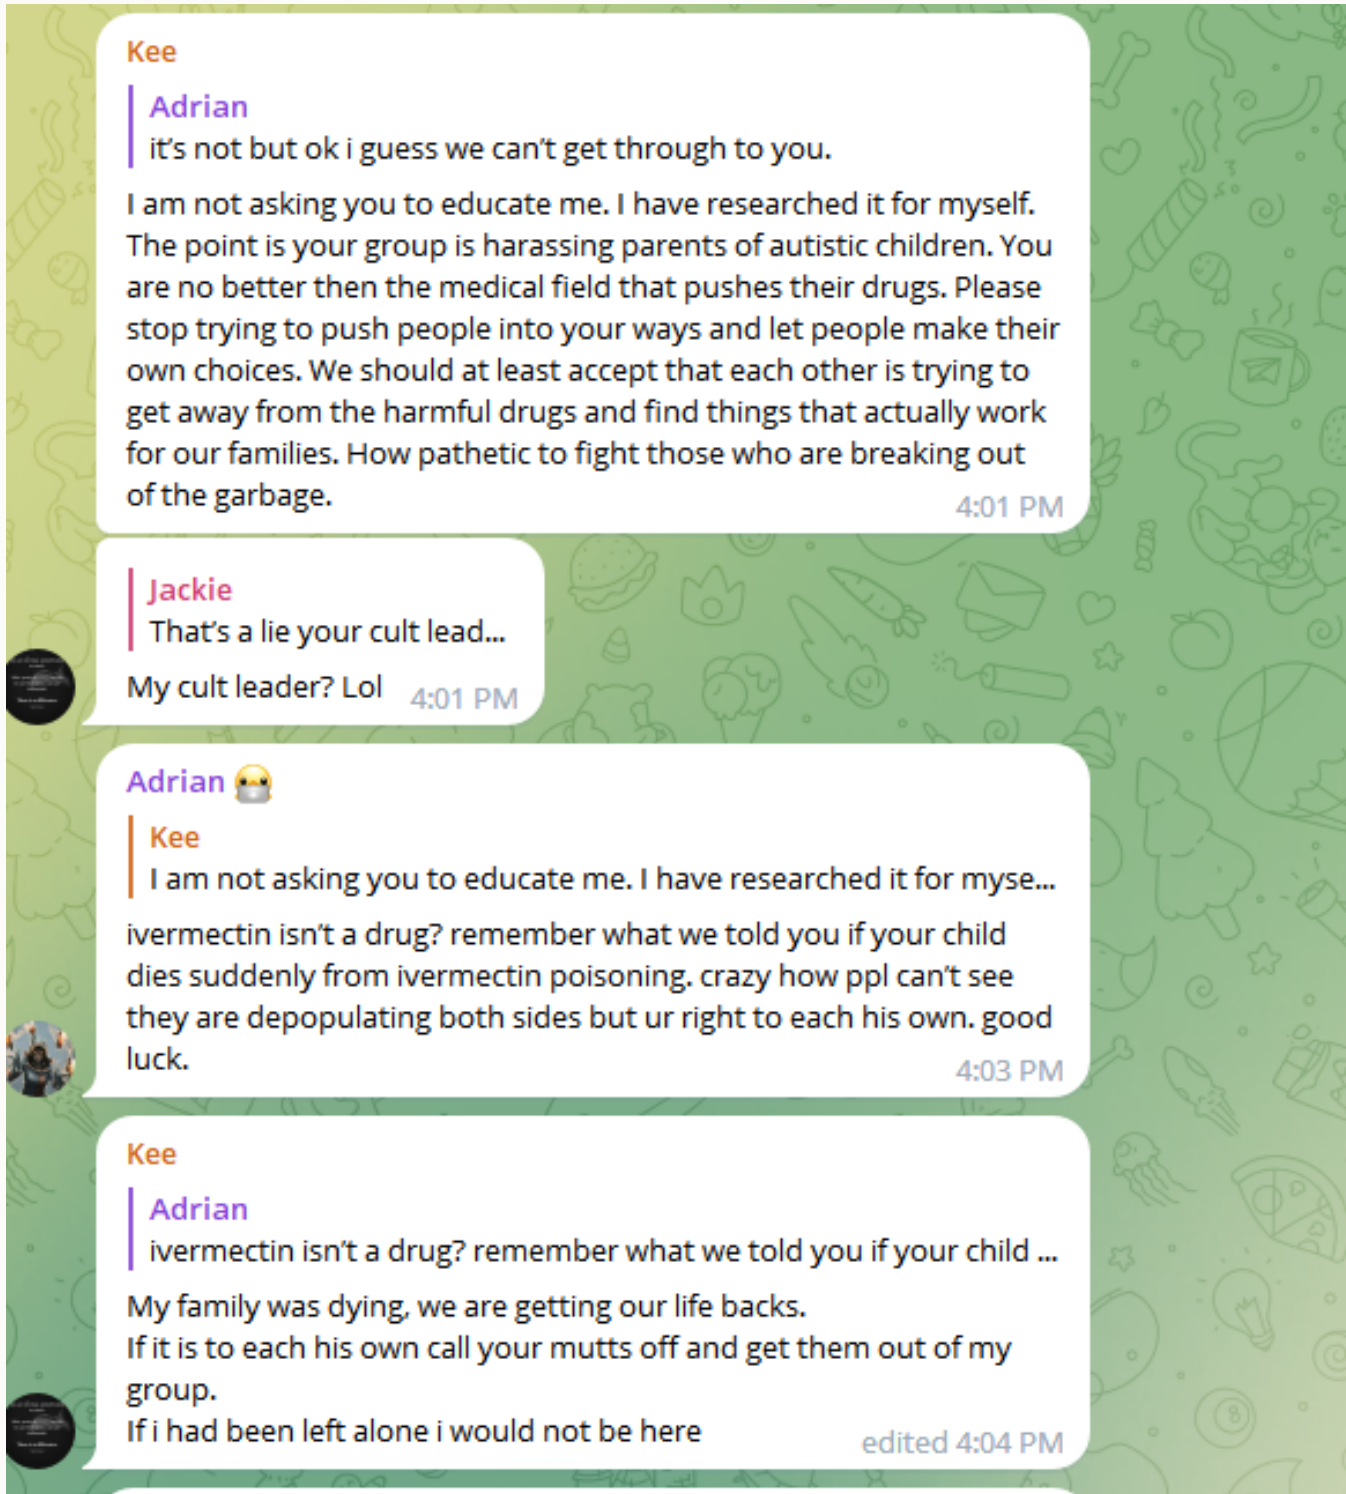

He's extremely restrictive with his food only eating fruit pouches and crisps for the past year. Dietician isn't incredibly helpful. I can't find any link at all that might cause these episodes weekly.

Everything seems confused by it all and just keep asking me has he had access to drugs - which he hasn't!

● The New Parasite Propagandists

Making Public Health Fun

Rose's RSC moved carefully to install a team of trained doctors as envoys to each state. These men were native southerners, and were young enough that they could work for the RSC full-time without having to put a practice on hold. Thus, the medical community was part of the project rather than a target of its criticism.

RSC demonstrations were festive, with lantern slides, giant posters, and streamers. In fact, the public lectures were attended less by adults than by children, who enjoyed the slide shows and the chance to look into microscopes. The young people would then bring their new knowledge home. RSC staff handed out brochures and pamphlets. Some were printed later as full-blown children's books like this one.⁹

PROTOCOLS | ONLINE HEALING
onlinehealingcenter.com

<https://go.globalhealingcenter.com/c/3012576/528199/5534>

■ **Ivermectin:** Gel: Consider using the Durvet horse gel: squeeze out $\frac{1}{4}$ inch and take 2x daily with food for the first 9 days, then 1-2x weekly for maintenance. You can order this on amazon. Herxing, or detox reaction is a very real situation, some people may need to begin slower such as $\frac{1}{2}$ ivermectin portion 1x/daily or every other day. Gradually build up. Listen to your body. Herxing is not a great feeling and some get better faster than others. People must be ready for this especially if they are very sick!

Ivermectin Tablet: Take one 12mg tablet daily. Only if you are not using the gel above.

IVERMECTIN BY AGE: Always take with food.

Ages 11-67 – Use normal portions above.
5-10 years – 68+ – those who are very sick – $\frac{1}{8}$ inch 1x/day.

See how you feel. If you feel good after a week, do $\frac{1}{8}$ inch both morning and night. Go up from there each week. Cut the portion down if at any time the herxing become horrible. Stay where you are for a while longer. Listen to your body. Nobody knows

Dr. Group's "Natural" Protocol

08

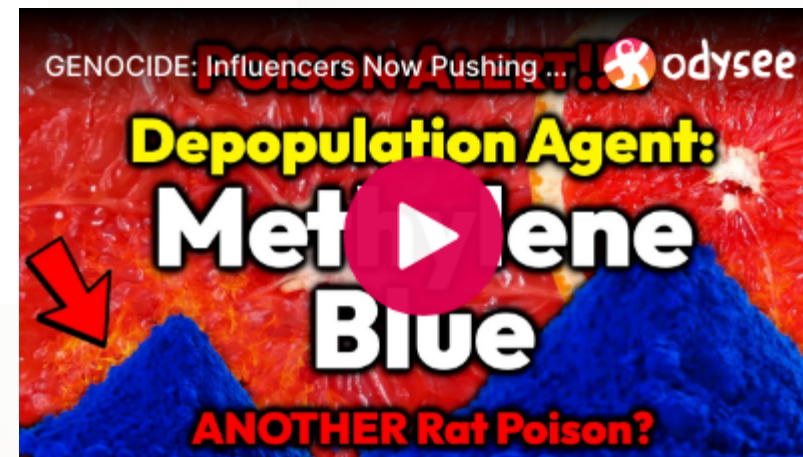

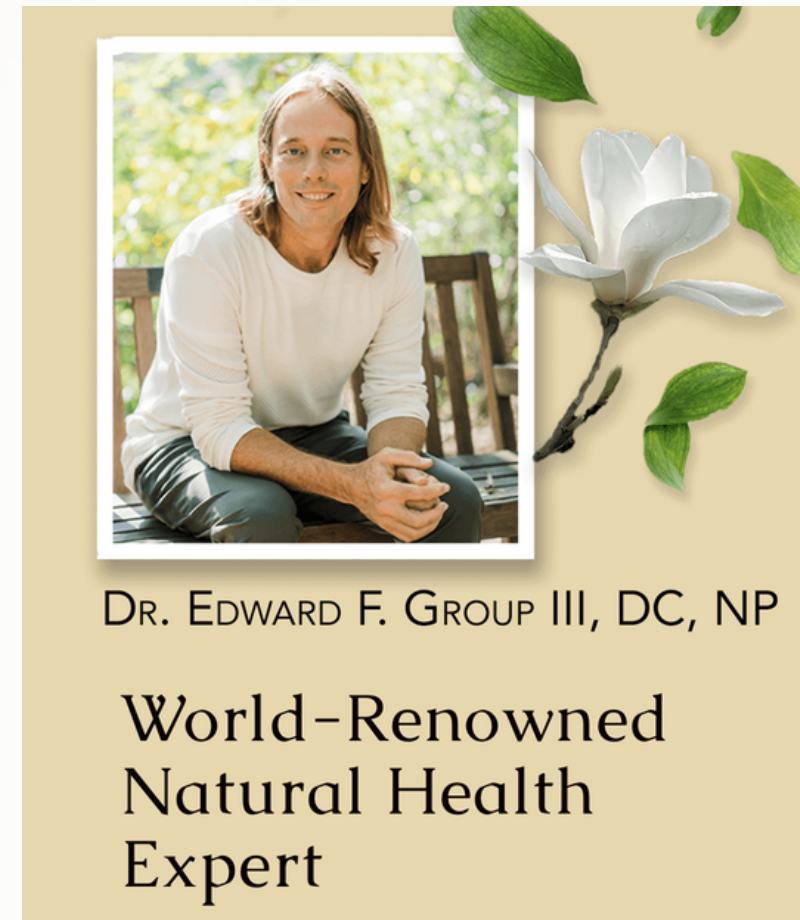

What We Would do to Detoxify from the Jab, Shedding, Long Haulers, and the new Covid

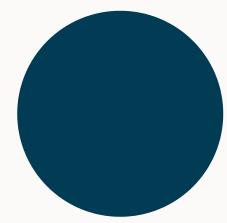

We have been getting reports of a new wave of sickness that is coming from either the injection shedding, reactions to the shot or a new muted form of Covid.

Symptoms include: Nausea, fatigue, emotional rollercoaster, coughing - dry, no fever or low fever, stomach issues - not wanting to eat, pain and stiffness in legs, hips and calves, occasional headaches, brain fog, auto-immune, neurological issues, blood clotting, skin rashes, feeling tired in the afternoons, swelling of the eyes and face, oxygen depletion, strokes, menstrual issues, and not feeling like you can finish a workout.

Below is the 12-Day Recovery. To get these products, just click on the hyperlinks below.

1. **Floratrex (Pre- and Probiotic):** Take three capsules, three times daily.
2. **Detoxadine (Organic Nascent Iodine):** Take 4 full droppers (80 drops) by mouth 2x daily. Also rub 1 dropperful over the right lung and 1 dropperful over the left lung and apply 1 dropperful on both inner thighs 1x daily. Rub a small amount over the injection site 6x daily if you have received the injection.
3. **Organic Vitamin D:** Take 20,000 IU twice daily.
4. **Organic Plant Based Zinc:** Take 7mg 3x daily
5. **Organic Turmeric:** Drink ¼ bottle 2x daily
6. **Veganzyme Enzymes:** Take 3 capsules 1x daily between meals
7. **Plant-Based Quercetin Phytosome:** Take 250mg 2x daily
8. **Mycozil (Candida & Flora Cleanse):** Take 3 capsules 2x daily.
9. **Bio PQQ / CoQ10 / Shilajit:** Take 2 capsules 2x daily. Protects the mitochondria and helps attack harmful organisms.
10. **Cuprous Nicotinic Acid (CU1):** 1 capsule (.9mg) 2x daily in the morning and evening.
11. **Supercharged C60:** - 10x more powerful than regular C60: Take 4 capsules, 2x daily.

BREAKING

Novavax Partners With Gates Foundation Offshoot In Efforts To Develop Malaria And TB Shots

Robert Hart Forbes Staff

I cover breaking news.

Follow

Jun 5, 2023, 08:32am EDT

Listen to article 5 minutes

TOPLINE American vaccine maker Novavax on Monday announced plans to share its powerful vaccine technology with the Bill & Melinda Gates Medical Research Institute, a nonprofit biotech spun out from the Bill & Melinda Gates Foundation five years ago, which could help develop shots for major health threats like malaria, tuberculosis and *Shiaella*.

Malaria shows up in Florida from mosquitoes.

Why? Oh, because Bill & Melinda Gates made a vaccine.

<https://www.forbes.com/sites/roberthart/2023/06/05/novavax-partners-with-gates-foundation-offshoot-in-efforts-to-develop-malaria-and-tb-shots/?sh=3a1b2f3b3d51>

4 10:56 AM

Endectocide is a veterinary parasiticide widely used in the livestock industry to control parasites such as intestinal nematodes, ticks, mange mites, lice, and cattle grub. When ingested by mosquitoes in a bloodmeal, endectocides have been shown to reduce the survival and fecundity of Anopheles malaria vectors. 0 Cattle treated with endectocide fecally excrete residues that are toxic to dung-inhabiting insects, including species that accelerate dung degradation. 2 Endectocide-treated cattle have the potential to be added to the malaria control and elimination toolbox as it also kills malaria mosquitoes feeding on the animals. Openly available data has been used to map the areas of the African continent where high malaria prevalence in 2-10 year old children coincides with a high density of cattle and high density of the partly zoophilic malaria vector Anopheles arabiensis. 1

Bill Gates and Jeffrey Epstein met with Nobel Committee chair

Former Nobel Committee chair Thorbjørn Jagland denied having met Jeffrey Epstein when asked by the current chairperson. An investigation by Norwegian business newspaper DN reveals Jagland hosted Epstein and Bill Gates in his Strasbourg residence in 2013.

IVERMECTIN KILLZ

Africa depopulation test sponsored by Bill Gates Foundation and Merck, before poisoning the whole world using covid as an excuse 🤪

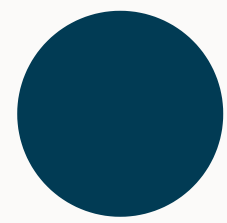

<https://www.merck.com/stories/mectizan/>

Now, look Merck's own description of Ivermectin:

Efficacy and Safety of High-Dose Ivermectin for Reducing Malaria Transmission (IVERMAL): Protocol for a Double-Blind, Randomized, Placebo-Controlled, Dose-Finding Trial in Western Kenya

Monitoring Editor: Gunther Eysenbach

Reviewed by Carlos J Chaccour, Hannah Slater, Teun Bousema, and Richard W Steketee

Acknowledgments

[Go to:](#) ▶

Many thanks to the members of the Trial Steering Committee (Teun Bousema, Kevin Kobylinski, and Brian Foy) and the Data Monitoring and Ethics Committee (Alejandro Krolewiecki, James Oloo, Timothy Collier, and Carlos Chaccour). Further thanks to the Mundo Sano Foundation and Elea Laboratories for donating the ivermectin, and NeurOptics for donating pupillometers. Finally, we would also like to thank Dr Juliana Otieno, Medical Superintendent, for accommodating the study at JOOTRH; Donald Tjia, Ophthalmologist, for supporting the study; and Jacco Veldhuyzen, Emergency Medicine Physician, for assisting in interpreting ECGs. This paper is published with the permission of KEMRI Director.

This study is funded by the Malaria Eradication Scientific Alliance (MESA), through a sub-grant from the Bill and Melinda Gates Foundation (BMGF). Neither MESA nor the BMGF has or will have any role in the design of the study, the collection, analysis, and interpretation of data, or in the writing the manuscript.

Efficacy and safety of high-dose ivermectin in reducing malaria transmission (IVERMAL) | Mesa

The aim of this study is to determine the safety, tolerability, and efficacy of ivermectin doses of 0, 300, and 600 mcg/kg/day for 3 days, when provided with a standard 3-day course of the antimalarial dihydroartemisinin-piperaquine (DP), on mosquito survival.
